ANNOUNCE

Release 2.4.3.**10** is available for downloading, with the following changes:

- Lifting the ban on running on KSP 1.8, as the glitch detected proved inoffensive (beside annoying) and was fixed on KSP 1.8.1
- Changing install layout for `Scale_Dist.dll`.
 - Needed to prevent being annoyed by Add'On Binder errors.
 - Please read [KNOWN ISSUES](#) for further information.

See [OP](#) for the links.

~~Github e Curseforge estão atualizados. SpaceDock e CKAN serão em algum momento entre agora e amanhã pela manhã, eu tenho que ajustar o netkan para uma~~

~~mudança na instalação de um arquivo e quero testar isso
direito para não ter que consertar bobagem depois.~~

Github and Curseforge are up to date. SpaceDock and CKAN will be updated sometime between now and tomorrow morning, I have to adjust netkan for a file installation change and I want to test it right so I don't have to fix it later.

-- --

SpaceDock is updated since today, Oct 31 9:00Z.

CKAN is [pending approval](#) of a change needed by KSP 1.8 merged!

I rushed things a bit today because we have a hard to crack sprint coming soon, and my time for this (*TweakScale*, *not work!!* 🤖) will be somewhat impaired. I want to keep the housekeeping in check before that sprint and in time for some resting (and KSP playing, something I'm not really doing for some weeks now). 🤖

Edited Wednesday at 09:27 PM by Lisias

small addendum. :D

Thank you Lisias for all the work provided and thank you, others, who helped Lisias to get a clearer picture on what was going on.

One of my favourite mod is now KSP 1.8.1 compliant, I still need KAC but more important kOS be updated so that I can move my career game to 1.8. (I have a craft which requires kOS to be flown).

AddOn Binder Error Fest on KSP 1.8

It was found that on KSP 1.8 you can't have the same DLL installed on different directories without triggering a AddOn Binder Error Fest.

Since, until the moment, AddOns willing to cooperate directly with TweakScale usually had their own copy of `Scale_Redist.dll` (the interface where such cooperation is realized), TweakScale's partners became a trigger for this Error Fest on KSP.log.

It's not clear, at this time, if this Error Fest is prejudicial or just an annoyance, but in a way or another, by eliminating every redundant `Scale_Redist.dll` from the system had solved the issue. However, this created a new one: it's necessary to guarantee that `Scale_Redist.dll` be available to any potential client in need of it, otherwise (and obviously) such a client will bork on a new AddOn Binder Error (and this one is fatal).

The way TweakScale managed to solve that second issue is to move `Scale_Redist.dll` to **GameData**, as `999_Scale_Redist.dll`.

I'm sorry for that, but this was the only solution I could find to overcome the AddOn Binder Error Fest, that was being triggered on every third party module using `Scale_Redist`. Had I didn't did that, TweakScale partners would be drowned on support requests due their modules triggering that thing.

I'm staying on 1.7.3 for the foreseeable future until some more mods are updated, and I upgraded to your latest version which says is compatible with 1.7.3, but installing it breaks Tweak Scale entirely (the option is not present on any part, but game is still playable).

Output

Log: <https://drive.google.com/file/d/1uHvE5du0H19NPp11R50NajZq7Wp0aFji/view?usp=sharing>

I know you need the Player.log, but the only file I have is several days old and pre-dates this update (exiting the program didn't generate a new file for some reason)

I can't seem to load Tweakscale with KSP 1.8 at all, even if it's the only mod installed (except Module Manager). The log complains about the binder errors you mentioned regardless:

Reveal hidden contents

Again, that's with just MM and Tweakscale (and Squad and SquadExpansion, obvs).

You need to copy 999_Scale_Redist.dll into GameData, as explained on the [INSTALL](#) and detailed on [KNOWN_ISSUES](#).

I'm sorry for that, but this was the only solution I could find to overcome the AddOn Binder Error Fest, that was being triggered on every third party module using Scale_Redist. Had I didn't did that, TweakScale partners would be drowned on support requests due their modules triggering that thing.

It's exactly the same problem, sir. Extract the 999_Scale_Redist.dll into your GameData and the problem will be solved.

— post edit —

I confirmed my diagnosis above. My test bed was flawed and gave me false positives. Once I fixed the test bed, things worked as I said. 🤖

~~if it is not temporally, consider add as install_to on~~
CKAN already there
